

# LAB-5 ASSIGNMENT

-J.S.R JAYANTH

-19BCE7170

## **Q) How secure coding related to XSS?**

**Ans:**

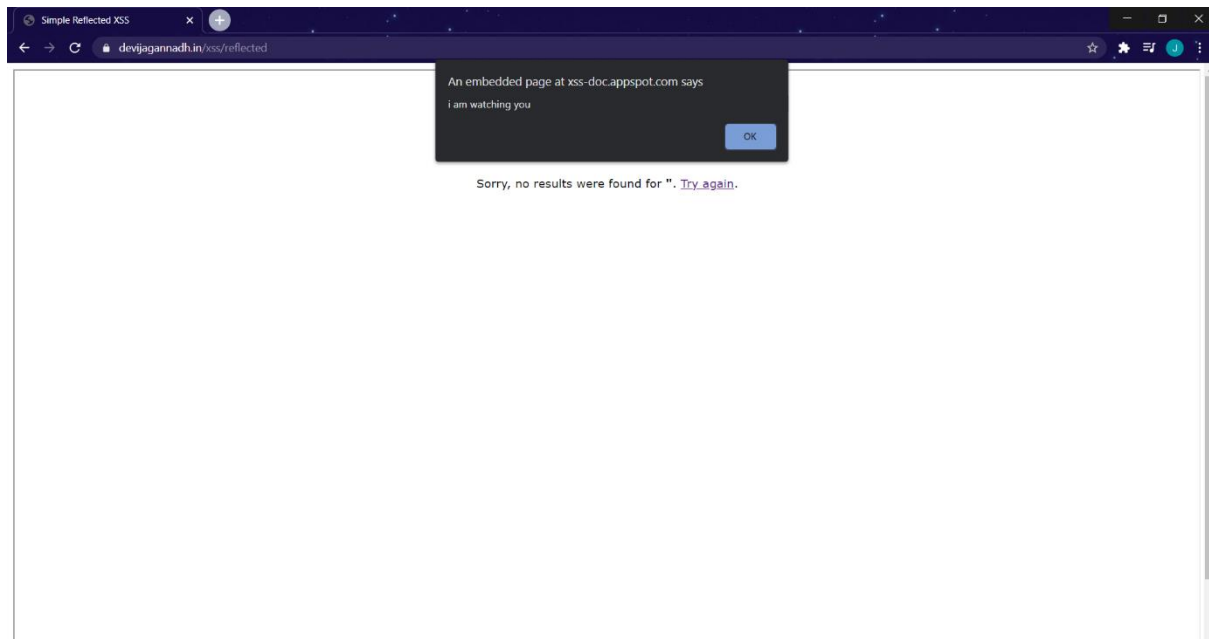

Cross-site scripting is a vulnerability that occurs when an attacker can insert unauthorized JavaScript, VBScript, HTML, or other active content into a web page viewed by other users. A malicious script inserted into a page in this manner can hijack the user's session, submit unauthorized transactions as the user, steal confidential information, or simply deface the page.

XSS allows malicious users to control the content and code on your site.

## **Q) R xss on demo website**

**Ans:**

**Q) Stored xss on demo website**

**Ans:**

This site is for educational purposes only!!
